

Information Sheet A

Landgate support for the recovery of communities affected by an eligible natural disaster in Western Australia.

I am pleased to advise that Landgate is able to offer disaster recovery assistance to communities severely affected by eligible natural disasters, as proclaimed under the Western Australia Natural Disaster Relief and Recovery Arrangements (DRFAWA) criteria.

While Landgate has limited involvement in the mitigation of disasters, the agency is in a position to help communities with disaster recovery efforts. An outline of our services is detailed below and further information is available from [our customer service team](#).

Item	Service
1	Landgate's MyLandgate system can assist with ownership details should problems arise and its Property Interest Report allows analysis of all interests on land, including utilities and heritage information.
2	Re-establishment of cadastral alignments to facilitate the re-pegging of property boundaries to ensure accurate placement of dwellings and fences.
3	Re-establishment of geodetic survey marks within affected areas to ensure stability of such marks used to monitor flood levels and engineering works
4	Provide Landgate staff as auxiliary GIS Volunteers to MAPS-WA, to assist the Department of Fire and Emergency Services and Western Australia Police with rapid response mapping and spatial data information coordination
5	The Imagery group can provide a procurement and processing mechanism for imagery (aerial or satellite) during the response and recovery phases of a natural disaster. The imagery products available include true colour imagery, vegetation enhancements or 3D models. Other location information products available to assist agencies include cadastre, topographic data, roads and property addresses.
